

Farmax

DRP PERFECT - SPADING MACHINE - NEW DESIGN

The Farmax DRP spading machine has a new adapted drive line. It's featured with a driven rotor that's powered from one single-side of the machine. This advantage creates the possibility for an additional driven roller behind the spader. The driven roller is also equipped with a special designed torque limiter, that's intended as overload protection for this additional roller. The turning point of the roller is also adapted, it's now in the center of the rotor so the spader operates with improved stability.

The new DRP Perfect is available in the working widths of: 2.50 2.70 and 3.00 meter
